Education

NIMS University, Jaipur

Aug 2024 – Jun 2028

B.Tech in Computer Science and Engineering (Artificial Intelligence & Machine Learning)

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Operating Systems, Database Management Systems, Computer Networks

Experience

Panacee Software Solutions

May 2026 – Jun 2026

QA Tester Intern

New Delhi, India

- Tested and debugged software features throughout the development life-cycle, identifying functional defects and logic gaps before release
- Wrote and executed structured test cases, using systematic debugging to isolate root causes of failures in application behavior
- Collaborated with the engineering team to reproduce issues, document findings, and verify fixes prior to deployment

Projects

Loan Approval Predictor

github.com/Txwariaditya/LoanPredictor

- Built an end-to-end ML pipeline for loan approval prediction with a Python backend exposed through a FastAPI REST service
- Structured the code base for reproducibility, with documented setup and run instructions matching the actual project layout

ML-Practice

- Implemented core supervised learning algorithms from scratch and using scikit-learn (regression, classification) with NumPy/Pandas for data handling
- Maintained a documented, organized repository as a working reference of ML fundamentals

Self-Hosted Cloud Infrastructure (adityalab.dev)

adityalab.dev

- Deployed and self-host personal projects on an AWS EC2 instance, configuring Nginx as a reverse proxy and PM2 for process management
- Diagnosed and resolved a production HTTPS/HSTS connectivity issue, restoring access and hardening the setup with Certbot

Wallpaper Engine

github.com/Txwariaditya/Wallpaper-Engine

- Designed a productivity-tracking desktop app in Python with a deterministic, unit-tested scoring core decoupled from a separate rendering layer that generates a daily wallpaper
- Implemented day-locking, a one-time recovery window, and monthly/7-day aggregation logic, validated with an automated test suite (pytest)

AI Chat Analyzer

github.com/Txwariaditya/AI-Chat-Analyzer

- Built a Python pipeline that parses chat logs and generates summary statistics and visual insights (topic distribution, sentiment/satisfaction trends) from raw conversational data
- Structured the project with separate data, processing, and reporting layers, and unit tests for core analysis logic

Technical Skills

Languages: Python, C, JavaScript

Database: MySQL

Concepts: Data Structures & Algorithms, Object-Oriented Programming, Debugging, Software Testing

Frameworks/Libraries: FastAPI, Node.js, NumPy, Pandas, Scikit-learn

Tools/Cloud: Git/GitHub, AWS (EC2, S3), Nginx, PM2, Linux/Bash
